Conclusion 总结

Observations show that Jiao's head acupuncture can promote nerve regeneration and significantly improve motor function, especially when traditional treatments fail.

研究显示,焦氏头针在传统康复治疗无效时,能促进神经再生并显著改善运动功能。

Its efficacy has been confirmed through tools like the Ashworth Scale, with patients potentially improving from AIS grade C to D.

使用Ashworth痉挛量表等工具证实其疗效,患者有望从AIS C级提升至D级。

Further research and clinical trials are needed to confirm the effectiveness of Jiao's head acupuncture and support its adoption as a viable alternative therapy in spinal cord injury rehabilitation.

进一步研究和临床试验将有助于确认焦氏头针的疗效,推动其成为脊髓损伤康复的有效替代疗法。
